

Technical Information

WatchDog Print Monitor was designed according to Microsoft standards with industry leading technologies to be compatible, flexible, and easy to use.

Technologies

Microsoft Visual Basic graphical user interfaces, (GUI's), allow for user friendly windows and controls.

InstallShield Professional allows for advanced installation options, compatibility, and reliability.

Seagate Crystal Reports enables WatchDog's reporting module to create flexible, detailed, and professional reports.

RoboHelp allows for flexible Windows standard help that can support Adobe, Word, HTML, and standard windows help files.

Windows API's, Application Programming Interface, adherence insures current and future operating system compatibility.

File Formats

Access Database gives end users the flexibility to manipulate data and create customized reports.

Application Compatibility

All Windows Based Applications that use a configured Windows printer are supported.

All "Dos" Based Applications are supported. "Dos" based applications are defined as any application, which does not use Windows printer drivers to create or send a print job.

Operating System Compatibility

Windows NT/2000/2003/XP compatibility allows for a complete enterprise solution.

Printer, Copier, and Fax Compatibility

Compatible with 100% of today's high quality/capacity printers, copiers, plotters, and fax devices.

Supports PCL, Postscript, and HPGL Drivers allowing for minimal system preparation.

Architectural Features

Modular Design allows for easy integration and modification.

Centralized or Decentralized installation accommodates most network environments.

Redundant System Settings insures data capture even when software has temporarily ceased to function.

Runs as a Service or Application insures software will operate securely and in a variety of environments..

Offline Mode allows for software operation when the network or server is unavailable.

Event Based Architecture requires minimal system and network resources when dormant.

Passive Mode Monitoring insures that WatchDog does not slow down or interfere with printing operations. This also means that no ports or drivers need to be installed
