

Features

WatchDog Print Monitor is one smart dog! WatchDog was bred to track and report on all your PC based, printing, plotting, copying, and faxing activity. WatchDog's design allows you to customize what print job information is retrieved, how it is retrieved, and what you do with the information once it has been retrieved.

"User Popup" Window

Easy to Use "[User Popup](#)" minimizes user interaction.

Multiple Print Job Selection allows the user to log multiple print jobs while only having to enter information once.

Minimize button allows the user to minimize the "User Popup" window, for logging print jobs at a later time.

Last Used Value option allows values to be automatically selected.

Optional Cancel button allows the user to cancel the logging of irrelevant or unbillable print jobs.

Detailed Print Job list enables user to easily identify print jobs.

Monitoring

A Diligent "[Monitoring Module](#)" is an excellent WatchDog, making sure every print job is detected and all print job information is gathered.

Monitors ALL PC Based Printing, plotting, copying, and faxing. This includes applications that use proprietary printer drivers for printing.

Passive Mode monitoring insures that WatchDog does not slow down or interfere with printing operations.

Network Communications insure that all printing is accounted for.

Configuration

A Powerful "[Configuration Module](#)" lets you train the "User Popup's" behavior on a per printer, per PC, or network wide basis

Validation Options allow you to customize how users are required to enter information.

Display Options allow you to determine if users are required to enter information.

Silent Mode Option allows for non interactive logging of all print job information.

Pause, Cancel, and Delete Options require the print job to be processed by WatchDog prior to printing.

Calculated and System Value Options allow you to gather any print job or system information you want.

Monitoring Server Option allows you to monitor all printing activity on your business network from one location.

Save Print Job Spool Data Option allows you to save the print job itself for viewing at a later date.

PreDefined Values allow you to build customized user selection lists.

Cost Options allow you to assign cost by printer, color, pages size, and media.

Reporting

Flexible "[Reporting Module](#)" lets you create customized professional reports on only the information you need.

Query Options allow the user to filter out irrelevant data.

Grouping Options allow the user to create organized professional reports.

Detailed\Summary Report Option allow the user to create reports that display detailed or summary print job information.

Summing Options allow the user to obtain totals on any information they need.
